

Does your child have a language delay?

Does Material Choice Improve the Effectiveness of Treatment for Difficulty with Past Tense? -- An Intervention Study

Purpose

To study how treatment materials affect how quickly children learn the past tense using generally accepted treatment methods.

Children receive up to 36 intervention visits free.

Children receive up to \$300 for participation.

Caregivers may receive a summary of all testing for their child, whether or not their child qualifies to participate.

Who Qualifies?

4 – 9 year old English-speaking children who have trouble learning language and don't have autism, hearing impairments, or mental retardation.

Children who are not using past tense verbs reliably.

Caregiver Responsibilities

Bring your child to a local site (school, daycare, community center) for 5 preliminary visits to evaluate your child's communication skills.

Allow your child to attend intervention sessions 2 – 3 times per week, for a total of 36 intervention sessions at an agreed upon location near you.

Bring your child to the intervention site for testing sessions at the end of the study.
